Another approach can be apply to work out the connections between the intervertebral disks, the fundamental frequency values and the regulation areas.

Below is another correlating areas for the intervertebral disks:

Below table provides an overview of 54 harmonising items for bioresonance. The middle column is the name, while the number of corresponding fundamental frequency values is given in the right column. For example, if the pre-control (item# 51) and the liver (item# 17) are selected, a total of $77 + 28 = 105$ fundamental frequency values will be harmonised.
